

SPIRAL CONVEYOR

The Spiral conveyor is suitable for transport of light to medium weight and fragile goods, both loose and packaged. If you are in need of capacity for accumulation, it is possible to connect towers for transport of the product up and down.

Fits where the floor space is limited but the need to work with large volumes in a smooth and efficient manner exists. The spiral conveyor is easy to adapt to the possibilities of the premises through height levels and widths.

Construction	Welded steel construction alt. aluminum construction
Size	Depends on the space
Belt width	250 mm - 600 mm
Angel	5-12 degrees
